## OUR VISION

To deliver dependable, efficient, and environmentally sustainable power solutions that empower businesses, communities, institutions and individuals.

## OUR MISSION

To become West Africa's most innovative and reliable provider of power rental ,Green energy (hybrid and solar energy systems)and service excellence.

## OUR CORE VALUES

- Reliability – Power you can depend on.
- Customer Commitment – Service beyond expectations.
- Safety – At the heart of all our operations.
- Sustainability – Cleaner, efficient energy options.
- Innovation – Green energy (hybrid and solar energy systems) and systems tailored to needs.

# **DO YOU NEED POWER?**

Not Only Can We Deliver Standby Power On a Rental or Sales Basis, We Can Also Maintain It!

With extreme weather, increased demand for electricity and an aging grid, standby and portable power is more important than ever. It can be a complicated industry to navigate, so count on the experts and longtime Front Range staple, Generator Source, for your power needs.

## **What do we offer ?**

DAVERO ELECTRICAL ENGINEERING LIMITED offers sales of new generators from GREEN POWER GENERATORS and used BREDE-NOORD GENERATORS for rentals, and field services. We have been in the power generation business going on for over a Decade in Ghana with our mother company based in the Netherlands.

## **OUR JOURNEY SO FAR**

We have successfully designed, procured and installed energy supply systems throughout the 16 regions of Ghana and parts of West Africa.

## RENTAL

Rental is the most flexible solution! Always the right capacity at the right place at the right time. We provide you with power 24/7, including cables, cabinets and fuel supply at the location where and when you need it. Whether it is about generators, light towers.

## WE HAVE :

1. Generators From 6kVA To 2000kVA
2. Accessories, Cables, Fuel Tanks, Light Towers
3. 24/7 Support
4. Transport And Delivery Service

# SERVICE

Security is important .Therefore a reliable energy supply is important. The installation needed for this purpose requires professional maintenance. Not one system is identical and therefore we deliver a matching service strategy. Here our extensive service package is focused on the optimization and increase of your power security.

## INCLUDING :

1. 24/7 Support
2. Direct Advise, Or Mechanic / Technician On Site
3. Fast And Reliable
4. A Solution Oriented Approach

# SOLUTIONS

A unique tailor-made energy solution? Together with you, our technical experts would like to come up with fitting solution for challenging and specific energy requests and projects. Based on our many years' experience and innovative strength our team provides a fast and pragmatic solution, anywhere necessary .

## BEARING :

1. Access To Performance

2. Risk Management
3. Complex (Mobile) Energy Projects at International Locations?
4. Less Emission, Fuel Saving Measures, Combination of New and Old Technologies and/or Storage of Energy

# SALES

For long-term projects, buying a gen-set is a smart choice.

Davero offers two options: new generators from Green Power Generators (Italy) and reliable used units from Bredenoord. We'll guide you on the best solution—conventional or hybrid—with service and warranty options to ensure your energy security.

## THIS INCLUDES :

1. New, Used, Revised And Reconditioned Engines
2. Fast Delivery
3. Sales And Leasing
4. Service And Maintenance
5. Competitive Pricing
6. Large Stock Of Generators And Engines

# Power your future with Davero & Green Power

When reliability, performance, and environmental responsibility matter, Davero offers new generator sets from Green Power Generators, an innovative manufacturer based in central Italy. Built in Pesaro and Sassocorvaro, their generators are 100% “Made in Italy”, embracing both craftsmanship and sustainability.

## How it benefits you

1. Energy continuity – Reliable backup power during outages or high-demand periods.
2. Custom suitability – Solutions tailored to your industry: industrial, healthcare, telecom, marine, and more.
3. Cost efficiency – Fuel-efficient, low-maintenance designs reduce long-term operating costs.
4. Environmental compliance – Low-emission systems meet international environmental standards.
5. Dedicated support – Full warranties and fast local service from Davero's expert team.
6. Davero and Green Power is Total Energy Security.

# OUR RENTAL FLEET

Each unit is backed by real-time monitoring by our technical team, intelligent load balancing, and on-site support.

# INTRODUCING THE HYBRID GENERATOR

The Hybrid Generator is an innovative energy system that combines two sources of power: solar energy and diesel or gas-fueled generator power. During the day, it uses energy from the sun. At night or when solar power isn't enough, the generator automatically switches on to provide backup. This smart technology helps deliver reliable power 24/7, efficiently and sustainably. This makes the Hybrid Generator Ideal for Homes, Businesses, Institutions especially in areas with limited or off grid supply and connectivity. This offers dependable long term solution and efficiency .

**The hybrid generator provides several advantages including the following;**

#### **Energy Saving:**

By relying heavily on the sun during the day, users save significantly on diesel or petrol.

#### **Ensuring Reliable Power:**

The system provides uninterrupted power by automatically switching to generator mode when needed.

#### **Environment Friendly:**

Less fuel means fewer emissions, helping Ghana meet its climate and sustainability goals.

#### **Lower Maintenance Costs:**

Less operations significantly reducing, wear, tear and operational expenses.

#### **Online Monitoring:**

We use remote tools that let us track the performance of our hybrid systems, fuel use, and faults in real time for fast support.

#### **Great Value:**

With high fuel cost, power fluctuations and sometimes unreliable supply of power, our Hybrid power solutions offer smart Investment utilizing solar energy.

# INTRODUCING POWER MANAGEMENT

## SYSTEMS

Power management is the solution for all sorts of users who need a slow or phased difference in their power demand.

By cleverly switching the connected generators in response to power required, the engines work in their optimal operational zone.

This increases the yield of the total set-up of your temporary power supply.

## MEET THE SYNCHRONIZING BOX

If you desire optimal operational safety, we recommend you the deployment of synchronizing boxes. These products offer power reliability by synchronizing two or more generators.

In combination with capacity management there are also other advantages to be obtained, including fuel reduction and emission reduction.
